

Act Report

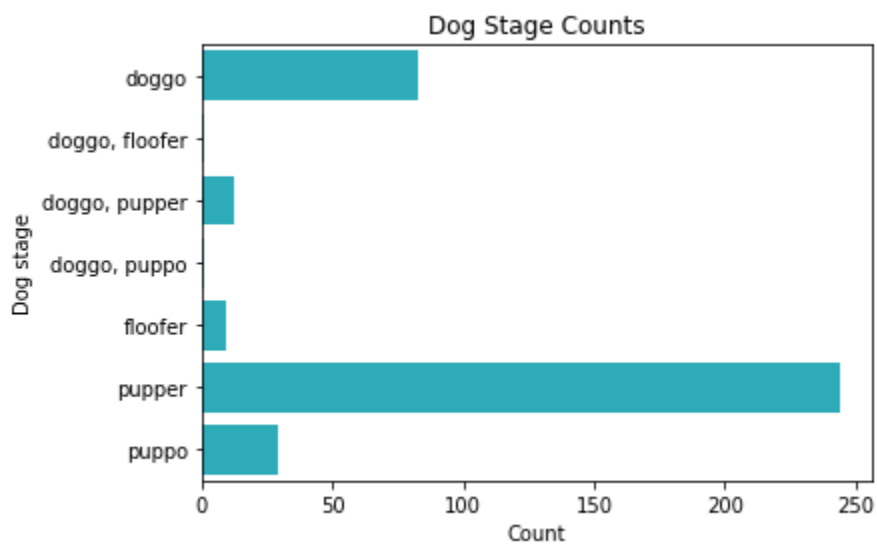

WeRateDogs is a very popular hash tag in twitter in which people rate dogs with denominator of 10 but usually it is more than 10 in a way that people show how much they love dogs ,In this work flow I pulled a real world data from twitter in which I cleaned and analyzed .

After wrangling the data I had some insights which I had to answer some of them using visualization with visualization tool and libraries as matplotlib and seaborn

The first insight that I had when assessing the data and when I found the source column is what is the source that most of the people are using so I did my preparation and visualization and found it to be iphone users

The second insight that in a dog's lifetime he passes through difference stages growing up and each stages had a name (pupper, doggo, puppo, and floofer) so I was wondering which one occurs the most in the data pupper which is the early stages of a dog no wonder it really is cute.

The last insight that I had was which dog types are beloved the most and I found that people love the golden retriever as it is the most favorable as it appeared 1696627 times in the data followed by the Lebrador

golden_retriever	1696627.0
Labrador_retriever	1123850.0
Pembroke	994755.0
